What does the data base tell us?

1. The main SPS problems faced by each country/region to export agricultural products to key importing markets
2. The most affected agricultural products

How the data can support governments, international institutions and private sector?

1. It provides the necessary information to focus the areas of intervention where most support is needed

2. Combined with additional data it can be used as indicator to evaluate the performance of an intervention focused to address a particular problem detected
1. It allows each country to monitor the main SPS problems faced by the neighboring countries

2. It allows the establishment of benchmarks

3. It helps monitor the improvements done by a country on a SPS problem over the years

4. It allows the private sector to know and try to avoid the same SPS related problems that are affecting the competitors

5. It provides data for analytical research
